Fluid Refill System

The SnowMasters Fluid Re-fill Systems is a proprietary system that automatically maintains the fluid levels in your SnowMasters Special Effects devices. Compatible with all other equipment that utilizes non-explosive chemicals, it can also be used in machines such as foggers, hazers, snow machines etc. The system detects the fluid level in the equipment's smaller built-in reservoir and signals a transfer pump connected to a bulk supply drum to refill the reservoir — all without user intervention! This is an ideal solution for installations with limited or difficult access such as ceilings or stages or when extended run-times are desired.

Package Includes

- Includes everything required to install the system
- Control Module with built-in pump
- 1 gallon adapter lid
- Inlet Strainer
- 75 feet remote control cable
- 100 feet of flexible hose
- Illustrated Instructions

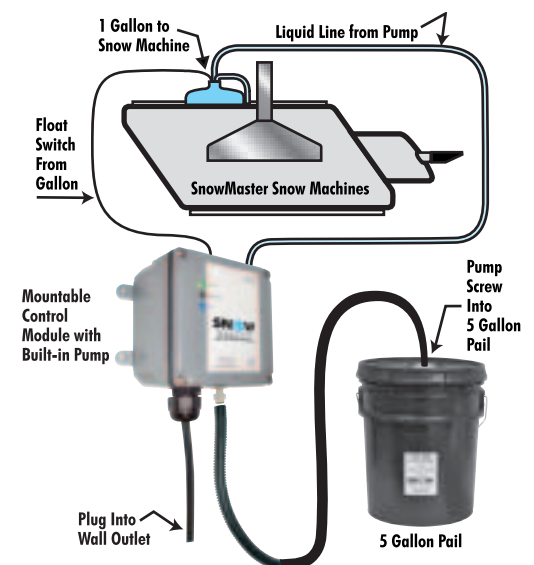

Technical Specifications

- Four Mounting Tabs
- Available in 110 volt and 220 volt models
- Pump and Control Assembly Sealed against moisture
- 650CC/min (21 ounces/min)
- Low Voltage (< 15 volts) Fluid Detection
- Fluid transfer of over 300 feet
- Exceeds CE Standards
- Built-in diagnostics indicators
- Dimensions approx. 4" x 4" x 4"

Accessories

- 75 foot Control Line Extension Cords
- 100 foot roll flexible fluid hose
